- This test is 8 pages long. Make sure you have all 8 pages.
- If you need extra space use the last page.
- Please show your work. An unjustified answer may receive little or no credit.
- Your work must be neat. If I can't read it (or can't find it), I can't grade it.
- Please turn off your mobile phone.
- Calculators are prohibited.

1. (24 points) Consider the following four-candidate, seven-voter election.

| Number of votes |  |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  | 3 | 2 | 1 | 1 | 1 | 1 |
| $1^{\text {st }}$ | A | C | B | D | D | A |  |  |  |  |  |  |  |
| $2^{\text {nd }}$ | B | D | C | B | C | D |  |  |  |  |  |  |  |
| $3^{\text {rd }}$ | C | B | D | C | B | B |  |  |  |  |  |  |  |
| $4^{\text {th }}$ | D | A | A | A | A | C |  |  |  |  |  |  |  |

(a) (8 pts) Draw the majority rule digraph to determine a Condorcet winner, if one exists. If one does not exist, say why.
(b) (3 pts) Apply Hare method to determine a winner for this election. Show all your steps and state why this candidate is the winner.
(c) (3 pts) Apply plurality voting to determine a winner. Show your work and state why this candidate is chosen as the winner.
(d) (5 pts) Apply sequential pairwise voting with the agenda D C B A. Show all your work and state why this candidate is chosen as the winner.
(e) (5 pts) Apply the Borda count to determine a winner. Show all your work and state why this candidate is chosen as the winner.
2. ( 5 pts ) In the following election, plurality voting is used.

| Ballots |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $1^{\text {st }}$ | A | $\mathbf{A}$ | A | C | C |
| $2^{\text {nd }}$ | B | $\mathbf{C}$ | C | B | A |
| $3^{\text {rd }}$ | C | $\mathbf{B}$ | B | A | B |

The second voter (whose ballot appears in bold) realized that by changing his preference list to C A B, he can change the outcome of the election. Is this an example of manipulation? Why or why not?
3. (20 points) Six voters, A, B, C, D, E, and F use voting system [31: 14, 12, 9, 7, 7, 7]. For each of the following coalitions, answer the following: Is the coalition a winning coalition? Circle the critical voters. Is the coalition minimal? What is the voting weight of the coalition?
(a) (5 pts) Coalition: B C D E
Winning? Yes / No Minimal? Yes / No

Circle critical voters: B C D E
Voting weight: $\qquad$
(b) (5 pts) Coalition: A B E

> Winning? Yes / No Minimal? Yes / No

Circle critical voters: A B E
Voting weight: $\qquad$
(c) (5 pts) Coalition: A B D E
Winning? Yes / No Minimal? Yes / No

Circle critical voters: A B D E
Voting weight: $\qquad$
(d) (5 pts) Coalition: C D E F
Winning? Yes / No Minimal? Yes / No

Circle critical voters: C D E F
Voting weight: $\qquad$
4. (10 points) Four voters A B C D use the voting system [14:6, 5, 4, 3].
(a) (5 pts) List all winning coalitions and identify the critical voters.
(b) (5 pts) Calculate the Banzhaf power index of each voter.
5. ( 7 pts ) I am one of ten people who will be voting on legislation. This is my bill, so I will absolutely be voting yes. If the bill needs six votes to pass, how many ways are there for me to choose five additional voters for my coalition?
6. ( 8 pts ) Voters A, B, C, D, E, F use the same weighted voting system as the previous question, namely [31: $14,12,9,7,7,7]$. In the following voter permutations, identify the pivotal voters.
(a) ABCDEF
(c) A B C F E D
(b) F E D C D A
(d) B F E C D A
7. (15 points) Three voters, A, B, and C, are using the weighted voting system [7: 4, 3, 3].
(a) (3 pts) How many voter permutations exist in this voting system?
(b) (6 pts) List all voter permutations, and identify the pivotal voter in each.
(c) (6 pts) Calculate the Shapley-Shubik power index of each voter.
8. ( 6 pts ) When planning a movie night, nine of the mathematics graduates students devised a weighted voting system in which the host gets a large number of votes, with the other eight attendees each receiving one vote. The host's Shapley-Shubik Power Index is $1 / 5$. Calculate the Shapley-Shubik Power Index of each of the other attendees.
9. ( 5 pts ) Imagine a weighted voting system with 113 voters in which everyone receives the same voting power. What is the Shapley-Shubik power index of each voter?

Extra space for work.
